Also, at the Southern Animal Referral Centre, 14 March 2007 7:00 for a 7:30 start *"The ADE anaesthetic circuit."* This is presented and sponsored by David Humphrey. He will discuss the use of a low-flow anaesthetic circuit that he developed which we use in our clinic. We have found a substantial cost-savings in oxygen, soda-lime and isoflurane, more rapid recovery, slower rate of temperature loss (we actually have patients increase temperature once they are hooked up to this circuit).
