I seem to have collapsed!

Join us for a morning mini-conference event you won't want to miss. In a refreshingly new format, we will review collapse from four completely different angles in a quickfire presentation filled with useful tips for your clinic. Here's what we'll be covering:

Medicine - An update on Addison's disease

Matt will be reviewing the latest information on and approaches to diagnosis, treatment and long term management of canine hypoadrenocorticism.

Surgery - Cervical spinal injury

Cervical spinal injury is a differential diagnosis for patients with tetraparesis or tetraplegia. Melati will be reviewing the diagnosis, treatment and prognosis of a number of conditions that affect the cervical spinal cord.

Cardiology - Cardiac collapse

Richard will review causes of collapse due to cardiac disease. Richard will use case examples, including how to differentiate between syncope, seizures and episodic weakness.

Emergency - Haemabdomen

A common emergency is the collapsed patient. We will briefly touch on the basics of stabilisation, including fluid therapy, then the quick and easy tools you can use to assess the cause of collapse. We will focus on haemabdomen - how to work out what is happening, what you can do and what to tell the client.

When: Sun 11th July, 9am-12.30pm (8.45am for coffee)

Where: SARC - 248 Wickham Rd, Highett 3190

Medicine

Dr Matt Reeves

Specialist - Small Animal Medicine

Addison's - an update

Surgery
